API Introduction

Welcome to the **Index Game Center API**, the official API for integrating with the Index Game Center platform. This API enables developers, partners, and merchants to access our game catalog, automate purchases, and integrate seamless payment experiences

The API is designed to be **secure**, **scalable**, and **easy to integrate**, supporting a variety for server-side applications with automation services.

API Description

The Index Game Center API provides programmatic access to:

- 🎮 Game Management: Retrieve game listings, icons, descriptions, and required user inputs (UID, Server, etc.)
- 💰 Purchase Flow: Start, confirm, and validate game top-up purchases.
- 📦 Game Packages: View available pricing packs and purchase options for each game.
- 📋 Order Tracking: Optionally retrieve order status after purchase completion.

Key Features:

- RESTful endpoints
- JSON-based request/response structure

description: Check order processing status check

Authentication

1. Authentication

POST /api/v1/auth/login

Authenticate user and retrieve token.

Request

json

body

```
{  
  "username": "",  
  "password": "",  
}
```

Response

json

```
{  
  "status": true,  
  "token": "tokenid|eyJhbGciOiJIUzI1NiIs..."  
}
```

Info

Get User Details

2. Info – Get User Details

GET `/api/v1/me`

Get the currently authenticated user's profile.

Headers

`Authorization: Bearer {token}`

Response

```
json
{
  "name": "PlayerOne",
  "email": "user@example.com",
  "credit": 500,
  "total_buy": xxx,
}
```

Games

GET `/api/v1/games/{id}/packs`

Fetch available packs and pricing for a specific game.

Headers

Authorization: Bearer {token}

Response OLD Version

```
json
{
  "data": [
    {
      "pack_id": 1,
      "packname": "Diamond x100",
      "price": 100
    }
  ]
}
```

Response New Version

```
json
{
  "data": [
    {
      "pack_id": 1,
      "point": "100",
      "unit": "diamoin",
      "price_partner": 100
    }
  ]
}
```

Purchase

Submit Game Purchase

4. Purchase – Submit Game Purchase

POST /api/v1/purchase

Submit a game top-up request.

Headers

Authorization: Bearer {token}

Request

```
{
  "game_id": 101,
  "pack_id": 1,
  "input": {
    input_id:{
      "name": "uid",
      "value": "TH"
    }
  },
}
```

Server & Login ให้ใช้ value เป็นค่าเช่น ASIA
input_id:{

```
  "name": "server",
  "value": "ASIA"
```

```
}
```

Response

json

```
{
  "status": true,
  "order_id": "ORDER123456",
  "message": "Purchase initiated successfully"
}
```

Order

Check Order Status

ERROR

ERROR LIST

✖ API Error Response Codes

Code	HTTP Status	Message	Description
1001	400	Invalid Input	One or more required fields are missing or malformed.
1002	401	Unauthorized	The token is missing or invalid.
1003	403	Access Denied	The user does not have permission to access this resource.
1004	404	Not Found	The requested resource (game, pack, order) does not exist.
1005	409	Duplicate Order	The order was already submitted or is being processed.
1006	422	Validation Failed	The input data failed server-side validation (e.g. UID too short).
1007	429	Too Many Requests	Rate limit exceeded. Try again later.
1008	500	Internal Server Error	An unexpected error occurred on the server.
1009	503	Service Unavailable	The service is temporarily offline or under maintenance.
1010	402	Payment Required	The payment gateway declined the transaction or no payment initiated.
